

# EXPLORING FUTURES W/ CREATIVE COMMONS CANADA

In the last month of the last decade, we joined Creative Commons Canada (CCC) to collectively consider their future. We explored new perspectives, sourced exciting ideas, and had fun imagining collaboratively!

In December 2019, we got together with about a dozen members of CCC for an hour-long video chat to hear everyone's thoughts on the future of CCC. Our structured process was grounded in two methodologies:

**APPRECIATIVE INQUIRY** A philosophy of organizational change and social innovation that focuses on how the future can be built based on the best parts of the past & present.

**FORESIGHT** Encompasses a whole range of processes that allow us to explore possible and preferable futures in order to strategically orient the ways we work and live in the present.

---

This is snapshot of a quick and messy brainstorm session. The messiness of this document is meant to help signal that all of these ideas are evolving—they are part of an ongoing conversation. This report is intended as a way to invite more people into that conversation and to launch further, future dialogue.

## INSIDE:

**SIGNALS OF CHANGE** p. 2-8  
Observations of changes occurring in the present that could impact CCC

**PROJECTS** p. 9-10  
Near future projects that CCC members would like to work on or participate in

**VISIONS** p. 11-12  
2050 aspirational visions for CCC

**MOVING FORWARD** p. 13  
Some thoughts to seed further conversations

# SIGNALS OF CHANGE

What is an emerging change that you have been thinking about and that you think Creative Commons Canada should be thinking about too?

We wanted to understand how possible futures are manifesting in the present by looking at some signals of change. Signals of change are the things that are already happening, right now, that can give us a clue about what the future might look like. Some changes might be strong and really obvious; some might be weak, just slight possibilities that could evolve into something big.

## WHY THIS IS USEFUL

We see signs of how the world is changing all the time. Sourcing signals of change allows us to intentionally, explicitly pause and notice these changes and how they might influence the world we live in and the work that we do. Being more conscious of change allows us to see how we might need to evolve or adapt the work we do and the ways we do it to respond to emerging possibilities, opportunities, and concerns.

## NOTES ON OUR METHODS

We used the **STEEP**V framework to source and organize signals. The following descriptors were adapted from Proskuryakova, Saritas & Kzyngasheva (2015).

**SOCIETY** e.g., ways of living, demographics, social inclusion and cohesion.

**TECHNOLOGY** e.g., technological innovation, problems and risks associated with technologies, diffusion of technology.

**ECONOMY** e.g., economic growth, competition and competitiveness, markets, financial issues.

**ENVIRONMENT** e.g., sustainability, climate change, pollution, resource depletion, biodiversity, wildlife.

**POLITICS** e.g., dominant political viewpoints and parties, political stability, regulatory roles and actions of governments, political action and lobbying by non-state actors.

**VALUES** e.g., attitudes about working life, preferences for leisure, culture, social relations.

# SOCIAL SIGNALS

- Increased awareness for cultural protection and social justice within the Open movements
- Openness is increasingly seen as not always good—greater recognition of boundaries
- Increased human migration—opportunity for Open movements to play a role in facilitating migrant transitions
- Changing conceptions of property
- Proliferation of alternative ways of living and decentralization of culture

## DEFINING PUBLIC DOMAIN

## CULTURAL PROTECTION

## MIGRATION

## DEFINITIONS OF PROPERTY

## ALTERNATIVE WAYS OF LIVING

How might CCC help facilitate alternative ways of living?

How might CCC navigate the complexities of different cultures?

# TECHNOLOGICAL SIGNALS

- Increasing critical awareness of artificial intelligence
- Growing concerns around the ethics and transparency of how personal data is gathered and used
- Investment worldwide in tools for sustainable open scholarship
- Public consciousness about data surveillance and privacy
- Products and services intentionally designed to limit openness through proprietary technologies

## ARTIFICIAL INTELLIGENCE

## INVESTMENT IN OPEN SCHOLARSHIP TECHNOLOGIES

## POLICY AND SURVEILLANCE

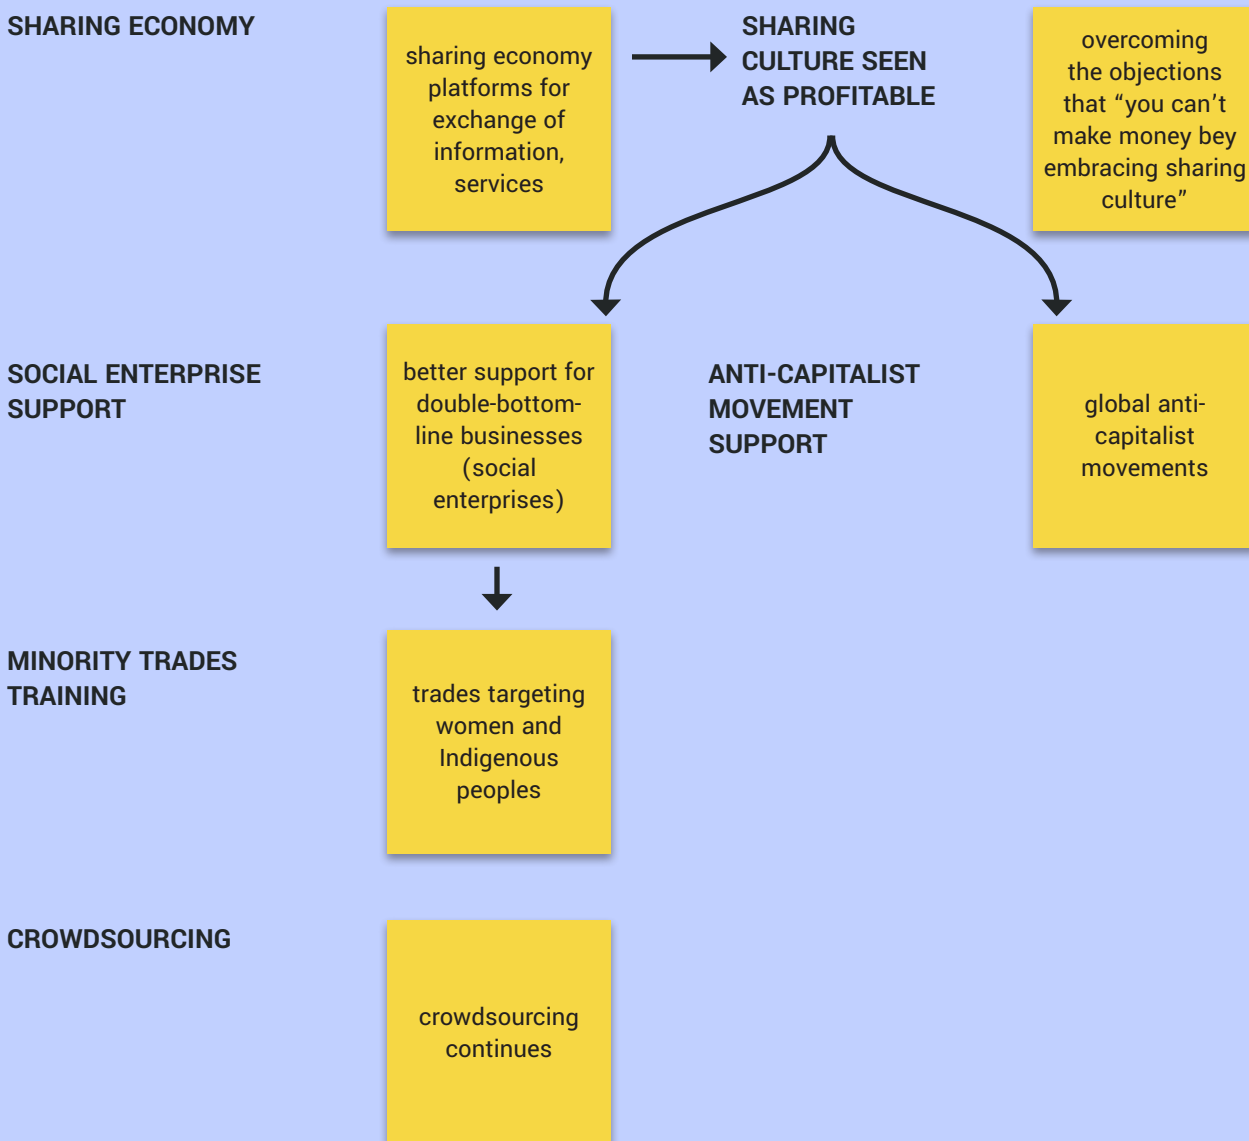

How might CCC serve as a model for ethical practices and safeguards around data privacy? AI? Surveillance?

How might CCC incentivize and encourage openness in technology?

# ECONOMIC SIGNALS

- Shift to sharing economies accompanied by new platforms to facilitate them; cultural recognition that profit can exist within sharing culture
- Support for social enterprises that recognize goals beyond profit
- Rise of global anti-capitalist movements
- Trades training focusing on women, Indigenous peoples, and minorities
- Crowdsourcing remains a viable financing model

What role might CCC play in emerging alternative economies? In anti-capitalist movements? In social enterprises?

What responsibilities does supporting and enabling these movements entail?

# ENVIRONMENTAL SIGNALS

- Open access to scientific and government information allows for more accurate assessments
- Legal personhood extended beyond people to non-human species and ecosystems
- Climate change presents an urgent need for multi-sectoral change

## OPEN RESEARCH/DATA

## PERSONHOOD EXTENDED

## CLIMATE CHANGE CHANGES US

How might CCC play a role in the climate crisis? What are CCC's responsibilities?  
What might truly open scientific data and publications do for our future?  
What are the implications of extending personhood for CCC?

# POLITICAL SIGNALS

- Discrepancy between open commitments of governments and government actions; loss of face in democracy
- Changing Canadian governments create windows of willingness for policy changes
- Governments are being asked for transparency in their decision-making process
- Policies for copyright and public access are changing

## DEMOCRACY IN TENSION

more open government commitments

vs.

increasing democratic deficit on the ground

## POLICY WINDOWS

policy window to push for an OE/OER national policy and funding mechanism

## GOVERNMENT TRANSPARENCY

governments "show they work": how they reached a conclusion, why, who's at fault/to praise

## COPYRIGHT POLICY CHANGE

a more sensible approach towards Crown copyright is needed

user rights must be protected within copyright law if the legislation is to serve the public interest

As evidenced by submissions to:

parliament (Copyright Act review report)

the Supreme Court of Canada (Keatley v. Teranet)

What role does CCC play in democracy?

What implications would a transparent government have on CCC?

How might CCC strategically work toward its goals regardless of changes in government?

# VALUES SIGNALS

- Growing cultural consciousness of the importance of diversity, inclusion, and equity
- Working toward reconciliation with Indigenous peoples requires finding ways to recognize, protect, and incorporate Indigenous knowledges
- Recognition of the time and effort required to produce open work
- Harm is often done in the digital world despite best intentions

## EQUITY

awareness  
of issues  
surrounding  
diversity,  
inclusion, equity

## INDIGENOUS RECONCILIATION

reconciliation  
with Indigenous  
peoples

find ways  
to protect  
Indigenous  
knowledge

the recognition  
and  
incorporation  
of Indigenous  
knowledges

## RESPECT FOR OPEN WORK

new respect  
for people's  
time/work with  
openness

## INDIVIDUAL VALUE

an individual  
can always  
contribute in  
some way (even  
in words only)

an individual  
should always  
have access

## BEST INTENTIONS STILL HARM

criticality (e.g.,  
ensuring that we  
don't do harm  
with the best of  
intentions

disregarding  
data privacy

forgetting  
about digital  
redlining

ignoring  
accessibility

How might CCC work with Indigenous communities on its initiatives and strategies?

How could diverse groups be involved in deciding the future of CCC?

How can CCC model its own support of transparency in the ways it approaches its own practices?

# PROJECTS

What is an ongoing/upcoming/aspirational project you are or would be excited to work on and that you think Creative Commons Canada should be involved with?

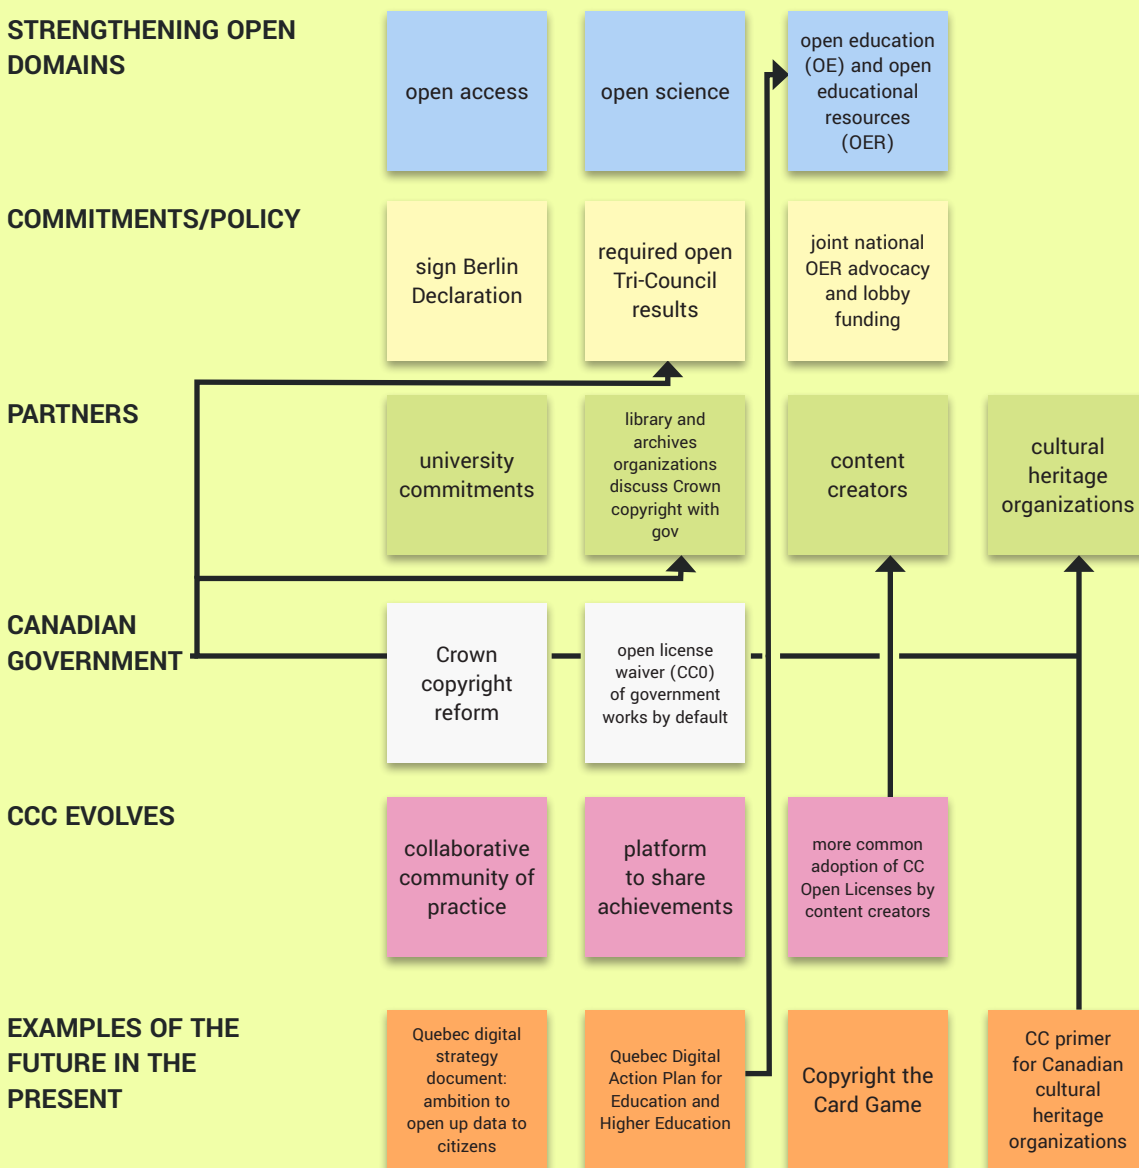

We took stock of the projects Creative Commons Canada members were interested in working on. This was a way for the community to update each other on what they are interested in and find potential support or collaboration.

## **WHY THIS IS USEFUL**

Understanding and publicly declaring projects that would be aspirational and exciting to work on helps to ensure that the CCC community is working proactively toward the types of futures they want, rather than working only reactively in response to changes or public needs. Working collaboratively on an aspirational agenda also allows everyone to find opportunities to support each other in making these projects realities.

# PROJECTS

- **OPENNESS** Strengthening open access to science, education, and resources
- **COMMITMENTS** Advocating for official commitments and policies nationally and at the federal government level
- **PARTNERSHIPS** Finding new partnerships with universities, libraries, cultural heritage organizations, and content creators
- **FLEXIBILITY** Pushing for federal legislative reform on Crown copyright
- **EVOLUTION** Evolving Creative Commons Canada into a platform for sharing achievements, a community of practice, and a common resource and license for content creators
- **LEARNING** Looking to current examples of best practice

# VISIONS

What would extreme success look like for Creative Commons Canada in 2050, 30 years into the future?

Questions you might want to think about:

- What has CC Canada achieved in the last 30 years?
- What do CC Canada activities look like in 2050?
- What does the public think about CC Canada?
- What does your daily life look like?

Visioning is often used to build out scenarios of desirable futures. Visions aren't meant to predict the future or imagine a probable future, but a future you want. As an initial visioning sprint, we had some fun working through first thoughts about what a positive future scenario could look like in the CCC world.

## **WHY THIS IS USEFUL**

Imagining a desirable future makes it easier to build commitment for it and strategically work towards it. Visioning exercises prompt us to think about different aspects of the future explicitly, from aspects of daily life to what whole domains, systems, and geographies might look like. By working through these prompts, we can begin to deepen and perhaps generate entirely new ideas for what a desirable future for ourselves and our work could look like.

## **NOTES ON OUR METHODS**

**HORIZON** 30 years. We chose this horizon because it is far enough in the future that the world will likely look drastically different, but not so far in the future that it is difficult to imagine specific scenarios in a limited visioning session.

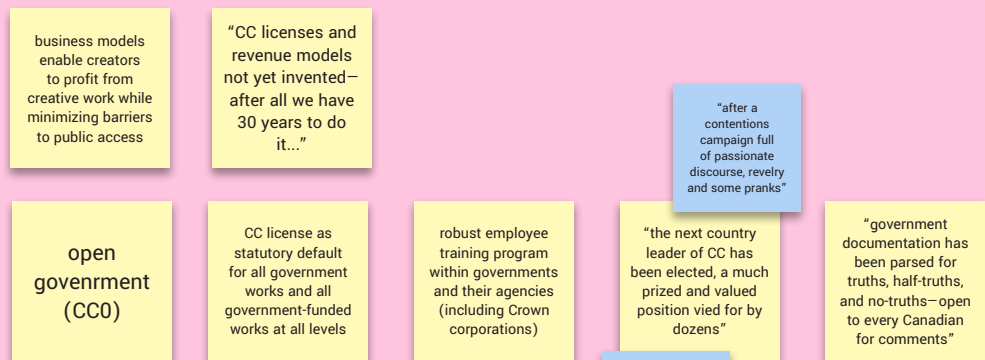

**BACKCASTING** A tool that begins with an aspect of a future scenario and asks us to imagine the events that might have made it possible. More traditional "forecasting" begins in the present and projects forward. This might lead to simply extrapolating the present rather than imagining new possibilities for the future. Backcasting prompts us to think through the conditions that make our desirable futures possible.

**EVERYDAY LIFE** Prompts that ask us to imagine everyday life in the future call our attention to how our worlds are made up of many common practices. While the change of whole systems or domains are often difficult to imagine vividly or without falling into tropes, imagining differences in daily life helps us to make the future concrete, visceral, and descriptive.

# VISIONS

- **NEW ECONOMIC MODELS** Creative Commons revenue models and licenses enable creators to profit from their creative work while minimizing barriers to public access
- **OPEN GOVERNMENT** A truly open government operates with Creative Commons as the default
  - Robust Creative Commons training programs educate all employees within governments and their agencies
  - Government aims for complete decision-making transparency to all Canadians
- **OPENNESS NORMAL** Thoughtful openness has become the norm
- **OPEN EDUCATIONAL RESOURCES** Educational resources are open, free, and publicly-funded at all levels
- **OPEN SCIENTIFIC RESEARCH** Scientific research is responsibly open from its practice to its outputs, policies, and guidelines
- **CANADIAN CONTENT** Creative Commons licensing by default increases visibility and impact of Canadian content and makes reliable, perpetual access possible

## ECONOMIC MODELS FOR BOTH PUBLIC AND CREATORS

## THE RISE OF A TRULY OPEN GOVERNMENT

## OPEN IS THE NEW NORMAL

## EDUCATIONAL RESOURCES ARE OPEN AND FREE

## OPEN SCIENTIFIC RESEARCH

## CANADIAN CONTENT IS DISCOVERABLE

# MOVING FORWARD

## **Future discussions and initiatives are needed to:**

- Undertake further visioning to develop a clear articulation of a successful future
- Develop strategies for how Creative Commons Canada members could orient their collective efforts toward a desirable future
- Strengthen and build alliances and partnerships with organizations working toward shared objectives
- Look to best practices in other countries, organizations, and models
- Invite more conversations with people from all contexts and backgrounds to source even more insights, inspiration, and imaginings
- Incorporate your feedback into this living document

Let's open more conversations. Let's open more possible futures.

To a more open future!

Superorganism
